EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William L. Solomon on 02/09/2004.

The application has been amended as follows:

In claim 6, line 8, the word ~~the~~ has been deleted.

In claim 6, line 9, the word ~~the~~ has been deleted.

In claim 24, line 21, the phrase ~~of the~~ has been added in front of the phrase face plates.

In claim 24, line 23, the phrase "the two face plates" has been changed to ~~two other face plates~~.

In claim 24, line 24, the phrase ~~with their~~ has been added in front of the word abutted.

REASON FOR ALLOWANCE

2. Pavlick et al discloses a railway car comprising an underframe, side structures, and a roof structure, with the underframe being composed of a plurality of hollow shaped members, and the direction of extrusion of the hollow shape members being disposed along the longitudinal direction of the railway car; characterized in that said plural hollow shape members are formed so that material used to form both longitudinal ends of the railway car is softer than material used to form the longitudinal center portions thereof. Torke discloses an elongate frame member for a rail vehicle comprises a strain-free annealed zoned adapted to buckle under a compressive load. Myers disclose motor vehicle comprising frame members including energy absorbing members characterized in that the members are formed so that the material used to form both longitudinal ends of the railway car is softer than the material used to form the longitudinal center portions thereof. Wilkosz discloses a motor vehicle structural energy absorbing member comprising end portion with voids so as to allow impact energy absorption in one or more direction. However, none of the references of record suggests a railway car body wherein a plurality of hollow shape members are arranged along the circumferential direction of the railway car and welded to one another to form the railway car, whereby the material used to form both longitudinal ends being material formed by annealing in the manner defined in the instant claims 6, 24, 25 and in combination with other limitations of the claims. Therefore, claims 7, 9-13, 15, depending therefrom, are considered to be allowable.
